

OMAR TORBI

COMPUTER ENGINEERING STUDENT | FULL-STACK DEVELOPER

✉ torbi.dev@outlook.com 📞 +212 612892619 🌐 Portfolio 🐙 GitHub 🔗 LinkedIn

EDUCATION

Engineering Degree in Computer Engineering and Networks (IIR)

École Marocaine des Sciences de l'Ingénieur (EMSI), Rabat
2022 – Present

Baccalaureate in Physical Sciences

Lycée El Amria, Beni Mellal
2022

TECHNICAL SKILLS

Programming: Java, C++, SQL, PL/SQL, Python, JavaScript, TypeScript, PHP, C

Backend: Spring Boot, Laravel, Django, REST APIs, Firebase, Supabase

Frontend: React, Next.js, HTML5, CSS3, Bootstrap

Databases: Oracle, MySQL, PostgreSQL, MongoDB, ChromaDB

Architecture: OOP, MVC, Modular Architecture, RBAC, REST API Design

3D & AI: Three.js, OpenCascade.js, Gemini API, Semantic Search

DevOps & Systems: Git, Docker, Linux, Cloud Concepts

CORE STRENGTHS

Problem Solving
Cross-Functional Teamwork
Fast Learning & Adaptability
Agile Methodologies
Technical Documentation

LANGUAGES

Arabic: Native
French: Professional
English: Professional

INTERESTS

AI & Architecture
3D Technologies
Industrial Software
Fitness & Football

SUMMARY

Computer Engineering and Networks student with a strong full-stack software engineering profile and practical experience gained through two software development internships. Experienced in building scalable web platforms, secure REST APIs, AI-assisted features, database-backed systems, and interactive 3D industrial applications. Comfortable working across frontend, backend, data, and integration layers using modern development tools and modular architecture principles. Combines analytical problem-solving, technical adaptability, and product-oriented execution to deliver reliable and maintainable software solutions.

PROFESSIONAL EXPERIENCE

Full-Stack & 3D Software Developer Intern Summer 2026 — 2 months ZAHIRI METAL

- Architected a production-focused web CAD platform for industrial tube design and fiber laser cutting preparation.
- Developed responsive interfaces and interactive 3D visualization modules with React, Three.js, and OpenCascade.js.
- Implemented geometry processing, model validation, and STEP export workflows for Tube Pro manufacturing compatibility.

Software Engineering Intern Summer 2025 — 1 month Office National de Sécurité Sanitaire des Produits Alimentaires (ONSSA)

- Analyzed internal information systems and identified improvements for administrative workflow efficiency.
- Collaborated with technical teams to translate operational requirements into actionable software specifications.
- Documented functional needs, data flows, and implementation priorities for maintainable internal tools.

PROJECTS

Elevate — Recruitment Platform Spring Boot, React, MySQL Full-Stack Web Application

- Engineered a recruitment ecosystem connecting recruiters, candidates, job offers, and application workflows.
- Implemented secure role-based access control, authentication, and real-time application tracking features.
- Designed modular REST APIs and relational data models for maintainable backend evolution.

Intelligent Library Platform Spring Boot, React, Gemini API AI-Powered Document Platform

- Built a digital library supporting document management, semantic search, and AI-powered summarization.
- Integrated Gemini API and ChromaDB to improve contextual retrieval and user-facing knowledge discovery.
- Structured frontend and backend modules for clear separation of search, storage, and AI services.

True Shuffler Spotify API, JavaScript Music Playback Utility

- Developed a music playback utility interacting directly with Spotify APIs and user library data.
- Programmed fair randomization algorithms and pagination logic for large playlists and music libraries.
